Manual/Foam Cleaning – Tables & Racks

Manual/Foam Cleaning

- 1. Prepare cleaning solution by adding 2-3 ounces of Enrich No.299 per gallon of water to a suitable container or prepare wall mounted foamer.
- 2. If possible remove the table tops from the tables to allow for better cleaning (not all tops are removable).
- 3. Remove soils by scraping where necessary and pre-rinse heavy soils off surfaces. Pay close attention to the undersides of tables and the legs.
- 4. Brush or foam cleaning solution onto surfaces, covering all areas.
- 5. Rinse with clean water before solution begins to dry.
- 6. Sanitize using San-I-King No.451 at the rate of 1 oz per 5 gallons of water in a bucket to be poured over the surfaces or use wall mounted sprayer over all surfaces.
